

Communication Protocol of PV Grid-Connected String Inverters

V1.1.40

Version	Date	Note				
number						
V1.1.0	2016-4-11	Initial version.				
		Unofficial version(V1.0.13) is no longer used.				
V1.1.1	2016-5-13	modify the register address and some related content:				
		5039–Power limitation adjustment				
		5040–Reactive power adjustment				
V1.1.2	2017-5-13	Add Inverter model:				
		SG36KTL-M, SG10KTL-M,				
		SG12KTL-M, SG80KTL, SG80KTL-M,				
		SG125HV				
V1.1.3	2017-6-10	Add Inverter model:SG33K3J,				
		"Fault run" change to "Fault"				
		Add country code: UAE, Israel, Hungary				
V1.1.4	2017-6-15	AddSG125HV the number of MPPT and combiner board				
		information				
V1.1.5	2017-6-20	Add Inverter data point:				
		State setting				
V1.1.6	2017-7-10	Add Inverter fault/alarm code				
		007/030/031/032/033				
V1.1.7	2017-8-7	Modify the name of fault code:				
		003/006/014/016/019/021/022/025/026/041/042//048/049/050				
V1.1.8	2017-8-12	Delete Inverter fault/alarm code:				
		051				
		Add Inverter fault/alarm code:				
		053/054/055/056/059/060				
V1.1.9	2017-9-20	Add Inverter one working state				
V1.1.10	2017-9-26	Modify the code of JP				
V1.1.11	2017-10-19	Add Inverter fault/alarm code				
		564/565/580/581				
V1.1.12	2017-10-24	Add country and region code				
		26/27/28/29/63/64/65/66/67/59/98				
		Modify fault/alarm note:				
		"LCD" changed to "LCD or APP"				
V1.1.13	2017-11-2	Add Inverter data point: Total apparent power				
V1.1.14	2017-11-18	Add Inverter model: SG15KTL-M, SG20KTL-M				
V1.1.15	2017-11-25	Add Inverter model: SG30KTL-M				
		Add Inverter fault/alarm code: 116				
V1.1.16	2017-12-22	Add Inverter model:SG111HV				
		Modify SG10KTL-M, SG12KTL-M limit the maximum power				
		ratio of 110%				

V1.1.17	2018-1-18	Increase the support of "Total apparent power" point inverter model information
V1.1.18	2018-03-17	Delete some product types according to overseas sales list.
		"U1 Limit" default value is adjusted to 950.
		Add Inverter fault/alarm code: 117
V1.1.19	2018-04-24	Add Inverter fault/alarm code: 34/106
, 1.1.1,	2010 0121	Add country code: US-NE
V1.1.20	2018-05-24	Add PID work state, PID night recovery, PID day protection, PID
· 1.11.20	2010 00 2.	alarm code
V1.1.21	2018-06-15	Adjust the description of fault code 44
		Adjust the description of fault code23/40
		Add Inverter fault/alarm code:45/46
		Add Appendix 5
V1.2.22	2018-08-07	Add Inverter fault/alarm code:105
		Add Inverter model:
		SG110HV-M
V1.1.23	2018-8-17	Adjust the description of fault code2/15
V1.1.24	2018-08-31	Add Inverter data point : DC Voltage 6 –DC Voltage 12,
		DC current 6 –DC current 12; Current of 19th input–Current of
		24 th input
		Delete the fault/alarm code 6/26/75
		Adjust the description of fault code 15/74
V1.1.25	2018-09-18	Adjust address :DC Voltage 9 –DC Voltage 12,
		DC current 9 –DC current 12
		Add country code: MYS/PHL,
		Add Inverter fault/alarm code:
		566/567/568/569/570/571,582/583/584/585/586/587
V1.1.26	2018-11-7	Add Inverter fault/alarm code:448-471
V1.1.27	2018-11-7	Add Inverter model: SG33CX, SG40CX, SG50CX, SG110CX,
		Add SG5-20K Meter information(read-only register:5083-0104,
		holding register:5009-5015)
		Modify the name of fault code: 030/031/032/033/042
		Add Q(U)/Q(P) curve definition
V1.1.28	2019-4-9	Add Inverter model: SG250HX
V1.1.29	2019-5-23	Add Inverter fault/alarm code:
		220/221/222/223/224/225/226/227/514
		Modify the SG250HX power limitation setting range 0-1110, See
		Appendix 6.
		Add Inverter model:
		SG30CX/SG36CX-US/SG60CX-US/SG250HX-US
V1.1.30	2019-9-21	Add Inverter model:
		SG25CX-SA/SG100CX-JP, SG250HX-IN
		SUZJCA-SA/SUTUUCA-JF, SUZJUHA-IIN

V1.1.32	2020-6-17	Adjust the description and applicable Inverter of points, update					
		Appendix6, Appendix 9, Appendix10					
V1.1.33	2020-7-10	Add Inverter model:					
		SG250HX-IN-20					
V1.1.34	2020-8-15	Add Full-Day PID Suppression, Installed PV Power					
V1.1.35	2021-1-28	Add Inverter model:SG75CX					
		2. Update Country ID					
		3. Add 100% Scheduling to Achieve Active Overload					
V1.1.36	2021-2-7	1. Add Inverter model:					
		SG3.0RT, SG4.0RT, SG5.0RT, SG6.0RT, SG7.0RT, SG8.0RT,					
		SG10RT, SG12RT, SG15RT, SG17RT, SG20RT					
V1.1.37	2021-7-12	1. Add Inverter model: SG5.5RS-JP, SG49.5CX-JP					
		2. RT series machines do not support PID protection function,					
		the model description in the protocol is deleted (measuring point					
		5042)					
V1.1.38	2021-7-20	1. Add Inverter model:					
		SG0.7RS-S, SG1.0RS-S, SG1.5RS-S, SG2.0RS-S, SG2.5RS-S,					
		SG3.0RS-S					
		SG3.0RS, SG3.6RS, SG4.0RS, SG5.0RS, SG6.0RS					
		SG8.0RS, SG9.0RS, SG10RS, SG5.0RS-ADA					
		2. Modify the fault code description to be consistent with the					
		product specification					
V1.1.39	2021-10-18	1. Add Inverter model:					
		SG320HX, SG350HX, SG125HX-JP					
V1.1.40	2021-12-25	1. Add Inverter model:					
		SG125CX-P2, SG25/30/33/36/40/45CX-P2					
		2. Add Quick grid dispatch mode(32569)					
		3. Add Swift grid dispatch mode(32570)					

Valid for device types:

In production:

SG5.5RS-JP, SG0.7RS-S, SG1.0RS-S, SG1.5RS-S, SG2.0RS-S, SG2.5RS-S, SG3.0RS-S, SG3.0RS, SG3.6RS, SG4.0RS, SG5.0RS, SG6.0RS, SG6.0RS, SG9.0RS, SG1.0RS, SG5.0RS, SG5.0RS-ADA

SG3.0RT, SG4.0RT, SG5.0RT, SG6.0RT, SG7.0RT, SG8.0RT, SG10RT, SG12RT, SG15RT, SG17RT, SG20RT

SG30KTL-M, SG30KTL-M-V31, SG33KTL-M, SG36KTL-M, SG33K3J, SG49K5J, SG34KJ, LP_P34KSG, SG49.5CX-JP, SG50KTL-M-20, SG60KTL, G80KTL, SG80KTL-20, SG60KU-M

SG5KTL-MT, SG6KTL-MT, SG8KTL-M, SG10KTL-M, SG10KTL-MT, SG12KTL-M, SG15KTL-M, SG17KTL-M, SG20KTL-M,

SG80KTL-M, SG85BF, SG80HV, SG80BF, SG110HV-M, SG111HV, SG125HV, SG125HV-20 SG25CX-SA, SG30CX, SG33CX, SG40CX, SG50CX, SG36CX-US, SG60CX-US, SG75CX, SG100CX

SG100CX-JP, SG110CX, SG136TX, SG225HX, SG250HX SG250HX-IN, SG250HX-US, SG320HX, SG350HX,SG125HX-JP SG125CX-P2, SG25/30/33/36/40/45CX-P2

Discontinued:

SG30KTL, SG10KTL, SG12KTL, SG15KTL, SG20KTL, SG30KU, SG36KTL, SG36KU, SG40KTL, SG40KTL-M, SG50KTL-M, SG60KTL-M, SG60KU

Statement:

All hardware versions of SG60KTL share one device type code.

1. Introduction

This communication adopts modbus RTU protocol, and applies to the communication between Sungrow PV grid-connected string inverters and the upper computer (PC) monitoring software. This protocol can read the real-time operating data and fault states of inverters.

2. Communication Interface

1) RS485

	Default setting
Address	Inverter: 1 - 247 settable
	PC: 1 - 247 settable
Broadcast	Yes
Baud rate	9600bit/s
Check bit	Null or settable
Data bit	8
Stop bit	1
Mode	RTU
Appliance interface	RS485-2W cable connection

2) Ethernet (optional)

Default:

IP: 192.168.1.100;Sub-Net: 255.255.0.0

- Port: 502

3. Definition of Address

4. Data type

U16: 16-bit unsigned integer, big-endian

S16: 16-bit signed integer, big-endian

U32: 32-bit unsigned integer; little-endian for double-word data. Big-endian for byte data

S32: 32-bit signed integer; little-endian for double-word data. Big-endian for byte data

Example:

transmission order of U16 data 0x0102 is 01, 02

transmission order of U32 data 0x01020304 is 03, 04, 01, 02

The transmission order of multibyte data UTF-8: the high-byte data is in the front and the low-byte data is at back. Example: transmission order of UTF-8 data ABCD is A, B, C, D.

2. Value description

The decimal parameters are transmitted as integer after expansion. For example: 10.333 KW is transmitted as 10333; 800.5 V is transmitted as 8005. Negative numbers are transmitted as complement, 0xFFFF signifying -1.

Unavailable register cannot be viewed or set. The return of unsigned number is F, For example: "0xFFFF" is the return for U16, "0xFFFFFFFFF" is the return of signed number is the max. positive number, e.g. "0x7FFF" for S16, "0x7FFFFFFFF" for S32; 0x00 for UTF-8. UTF-8 occupies 1 byte. The length of odd number is complemented by 0x00.

Example:

SG80KTL only one MPPT input,

MPPT 2 voltage (5013)

MPPT 2 current (5014)

MPPT 3 voltage (5015)

MPPT 3 current (5016)

MPPT 4 voltage (5115)

MPPT 4 current (5116), The data for these registers are 0xFFFF.

3. Address type

Address of 3x type is read-only register, supporting the CMD code inquiry of 0x04.

Address of 4x type is holding register, supporting the CMD code inquiry of 0x03, and CMD codes write-in of 0x10 and 0x06. CMD codes 0x10 and 0x06 support the broadcast address.

Support Modbus error code 02 (address error), 04 (setting failure).

Visit all registers by subtracting 1 from the register address. Example: if the address is 5000 –5001, visit it using address 4999 –5000. Entering "01 04 1387 00 02 + CRC" to check the data of address 5000 –5001.

4. Verify type

CRC16 generates polynomial 0xA001, little-endian.

3.1 Running information variable address definition (read-only register, Address type: 3X)

Appendix

Appendix 1 Device Work State 1

Device state (registe	er 5038)		
State	Value read by register 5038	Grid-connected power generation	
Run	0x0	After being energized, inverter tracks the PV arrays' maximum power point (MPP) and converts the DC power into AC power. This is the normal operation mode	Yes
Stop	0x8000	Inverter is stopped.	No
Key stop	0x1300	Inverter will stop operation by manually "stop" via app. In this way, inverter internal DSP stops. To restart the inverter, manually start via app	No
Emergency Stop	0x1500		No
Standby	0x1400	Inverter enters standby mode when DC side input is insufficient. In this mode inverter will wait within the standby duration.	No
Initial standby	0x1200	The inverter is in the initial power-on standby state.	No
Starting	0x1600	The inverter is initializing and synchronizing with the grid	No
Alarm run	0x9100	Warning information is detected.	Yes
Derating run	0x8100	The inverter derates actively due to environmental factors such as temperature or altitude	Yes
Dispatch run	0x8200	The inverter runs according to the scheduling instructions received from the monitoring background	Yes
Fault	0x5500	If a fault occurs, inverter will automatically stop operation, and disconnect the AC relay. The fault information will be displayed in the app. Once the fault is removed in recovery time, inverter will automatically resume running.	No
Communicate fault	0x2500		Unconfirmed
Uninitialized	0x1111		No

Appendix 2 Device Work State2

Work State (5081 - 5082)	Note	
State	Corresponding BIT in address 5081-	
State	5082	
Run	0	Total run state bit BIT17
Stop	1	1

Key stop	3	3
Emergency Stop	5	5
Standby	4	4
Initial standby	2	2
Starting	6	6
Alarm run	10	Total run state bit BIT17
Derating run	11	Total run state bit BIT17
Dispatch run	12	Total run state bit BIT17
Fault	9	Total fault state bit BIT18
Communicate fault	13	Total fault state bit BIT18
Total run bit (device is grid- connected running)	17	
Total fault bit (device is in fault stop state)	18

Appendix 4 PID alarm code

LCD or APP display	Communication	Description	Note	
(decimal)	send data			
	(hexadecimal)			
			1. Check to ensure that the inverter is equipped with the PID	
			regulation function.	
			2. Check whether the ISO impedance protection value is	
432	0x01B0	PID impedance abnormity	excessively high through the LCD or the APP, so as to ensure	
432	UXUIBU	FID impedance adhormity	the requirements are met.	
			3. Check whether the positive and negative insulation	
			resistances to earth of the battery panel are excessively low.	
			4. Please contact SUNGROW if the fault still exists.	
	0x01B1		1. Check to ensure that the inverter is equipped with the PII	
			regulation function.	
433		PID function abnormity	2. Check device operating environment and ensure th	
433		PID function abnormity	transformer-side phase line or N line impedance to ground is	
			normal.	
			3. Please contact SUNGROW if the fault still exists.	
			1. Check if the actual ISO impedance is excessively large	
		PID	(greater than 1.5M ohms).	
434	0x01B2	overvoltage/overcurrent	2. Check whether the set PID control duty cycle is	
		protection	excessively large.	
			3. Please contact SUNGROW if the fault still exists.

8. Examples

Take ComTest for example.

a) Acquire one piece of running information

Supposed that the inverter address is 1, it needs to acquire data from address 5000 of 3x address type.

The PC sends (HEX):

01 04 13 87 00 01 85 67

The inverter replies (HEX):

01 04 02 01 32 39 75

Note: The type code of inverter SG60KU-M is 0x0132.

b) Acquire multiple running information

Supposed that the inverter address is 1, it needs to acquire 10 data from address starting from 5000 of 3x address type

The PC sends (HEX):

01 04 13 87 00 0A C4 A0

The inverter replies (HEX):

01 04 14 01 32 00 28 00 00 00 00 00 05 00 00 00 26 00 00 00 00 00 00 56 EA

Note: The type code of inverter SG60KU-M is 0x0132. The nominal output power is 4.0kW, two-phase. Daily power generation is 0. The total power generation is 5kWh. The total running time is 38h. The internal temperature is $0^{\circ}C$. The internal transformer temperature is $0^{\circ}C$.

c) Acquire SN

Supposed that the inverter address is 1, it needs to acquire 10 data from address starting from 4990 of 3x address type

The PC sends (HEX):

01 04 13 7D 00 0A E4 91

The inverter replies (HEX):

01 04 14 31 32 31 32 31 32 30 30 31 00 00 00 00 00 00 00 00 00 00 9B 56

Note:

- 1. SN data type is UTF-8;
- 2. Serial number is: 121212001
- d) Read one setting datum

Supposed that the inverter address is 1, it needs to read data from address 5000 of 4x address type.

The PC sends (HEX):

01 03 13 87 00 01 30 A7

The inverter replies (HEX):

01 03 02 07 D8 BA 2E

Note: the data read out is year 2008.

e) Read multiple setting data

Supposed that the inverter address is 1, it needs to read 10 data from address starting from 5000 of 4x address type.

The PC sends (HEX):

01 03 13 87 00 0A 71 60

The inverter replies (HEX):

01 03 14 07 DA 00 0A 00 1E 00 09 00 28 00 25 00 CE 00 AA 01 F4 00 00 80 53

Note: The data are October, 10, 2010, 09:40:37; Stop; power limitation on, power limitation value is 50 %.

f) Set one datum

Supposed that the inverter address is 1, it needs to set data from address 5000 of 4x address type.

The PC sends (HEX):

01 10 13 87 00 01 02 07 DA 19 4D

The inverter replies (HEX):

01 10 13 87 00 01 B5 64

Or

The PC sends (HEX):

01 06 13 87 07 DA BE CC

The inverter replies (HEX):

01 06 13 87 07 DA BE CC

Note: The setting data is year 2010

g) Set multiple data

Supposed that the inverter address is 1, it needs to set 10 data to address starting from 5000 of 4x address type.

The PC sends (HEX):

01 10 13 87 00 0A 14 07 D9 00 0A 00 1E 00 09 00 10 00 00 CE 00 AA 01 F4 00 00 3E 65

The inverter replies (HEX):

01 10 13 87 00 0A F4 A3

Note: The data are October, 30, 2009, 09:16:00, stop, power limitation on, power limitation value is 50 %.

h) Read device running information

Supposed that the inverter address is 1, it needs to set 8 data to address starting from 5038 of 3x address type.

The PC sends (HEX):

01 04 13 AD 00 0864 A9

The inverter replies (HEX):

01 04 10 55 00 07 DF 00 0C 00 15 00 04 00 0C 00 3B 00 0A EE D1

Note:

- 1) Device running state is Fault(0x5500); the fault/alarm time and code are valid in this state;
- 2) Fault time: 4 (0x0004):12(0x000C): 59(0x003B), Dec. (0x000C), 21(0x0015), 2015(0x07DF); the fault is island (0x000A).
